

**Fentanyl** is a very **strong opioid**.  
It's **tasteless** and **odorless**.  
You **can't tell what it is** by  
looking at it.

---

**Fentanyl  
is up to**

**50x**  
stronger  
than heroin

**100x**  
stronger than  
morphine

---

**People who sell drugs sometimes mix fentanyl  
into pills, meth, cocaine, molly, or other drugs.**

### **Harm reduction saves lives!**

Use these methods and tools to stay safer:

- Don't use alone.
- Use test strips.
- Carry naloxone.
- Know Good Samaritan laws. If you see an overdose, don't be afraid to call 911.

Or, don't use at all. It's only safe to use drugs your healthcare provider prescribed.
