

Fentanyl is a very **strong opioid**.
It's **tasteless** and **odorless**.
You **can't tell what it is** by
looking at it.

**Fentanyl
is up to**

50x
stronger
than heroin

100x
stronger than
morphine

**People who sell drugs sometimes mix fentanyl
into pills, meth, cocaine, molly, or other drugs.**

Harm reduction saves lives!

Use these methods and tools to stay safer:

- Don't use alone.
- Use test strips.
- Carry naloxone.
- Know Good Samaritan laws. If you see an overdose, don't be afraid to call 911.

Or, don't use at all. It's only safe to use drugs your healthcare provider prescribed.
