

Fentanyl is a very **strong opioid**.
It's **tasteless** and **odorless**.
You **can't tell what it is** by looking at it.

**Fentanyl
is up to**

50x

stronger than heroin

100x

stronger than morphine

People who sell drugs sometimes mix fentanyl into pills, meth, cocaine, molly, or other drugs.

Harm reduction saves lives!

Use these methods and tools to stay safer:

- Don't use alone.
- Use test strips.
- Carry naloxone.
- Know Good Samaritan laws. If you see an overdose, don't be afraid to call 911.

Or, don't use at all. It's only safe to use drugs your healthcare provider prescribed.
